- **10+ years** of experience in software development
- Worked in both **Startup** and **Enterprise** environments
- Extensive knowledge in both **Frontend** and **Backend** development

Work Experience

Software Engineer @ Exos (US company - remote - temporary - website)
2022-11 – 2023-02

As a software engineer at Exos, I had the opportunity to work on the development of a fitness app using a combination of technologies such as React Native, Node.js, and GraphQL. In my role, I was responsible for both the front-end and back-end development of the application. I took on various tasks, including converting designs from Figma into functional app screens that prioritized both high-quality user experiences and optimal app performance. Additionally, I integrated rigorous testing practices to improve app stability, ensuring seamless functionality for all users.

Software Engineer @ Round Pegs (US company - remote - website)
2019-11 – 2022-11

Helping in the development of modern and intuitive solutions aimed at the online auction market in Brazil.
Among these solutions, I developed a module of commercial conditions responsible for creating all the legal parts of the auction payments. However, here I had a big challenge due to the complexity of React.js state management that we need to apply to connect the system's legacy APIs to an entirely new and modern design.

Software Engineer @ Lawyerup (UK company - freelancer - remote - website)
 2020-06 – 2021-09

Lawyerup was a tool that I had the opportunity to develop from scratch, both the web project and the mobile APP.
After understanding the client's needs, I adopted an approach where the first version of the project was developed with React.js, React Native, and Firebase. My choice of Firebase for this project was so that we could accelerate the development and release of the project to allow the client to validate the tool in the shortest possible time.

Full Stack Engineer @ Freelancer (Independent - remote)
2017-02 – 2019-11

Working as a full-time freelancer was one of the moments I evolved the most as a professional, improving my hard and soft skills even more. In addition, I had the opportunity to work with clients worldwide, which allowed me to have a much greater view of the technology market.

Full Stack Engineer @ BomOuNao. (Brazilian company – remote)
2016-02 – 2017-02

BomOuNao was a satisfaction survey tool in which, through forms that are fully customizable by customers, we deliver the metrics necessary for customer audience growth.

Working at BomOuNao was a fantastic opportunity I had because this was a project where I was responsible for creating the project from scratch. In addition, I took care of the development (programming) and infrastructure of the project.

Full Stack Engineer @ Vivapixel (Brazilian company – remote - website)
2014-07 – 2016-02

When I worked at Vivapixel as a full-stack engineer, I had the opportunity to work on projects of all sorts. From small institutional websites to websites with thousands of users.
In this position, I was responsible for the frontend and backend development of

- Administrable systems
- Websites
- Portals
- Blogs
- Customizable modules
- E-commerce

CTO @ Grupo Mudde (Brazilian company – remote)
2014-07 – 2016-02

Grupo Mudde was my first experience as an entrepreneur, where I worked as CTO. Within the experiences I had in this position, I was responsible for:

- Organization of schedules, the study of needs, and deadlines.
- Coordination of the web development time.
- Development of web solutions using technologies such as HTML, CSS, Javascript, PHP, and Zend Framework
- SEO solutions for better positioning in search engines.
